CARE FOR EVERY SURFACE

CASE STUDY

RESTORING FAILING GROUT IN CORPORATE RESTROOMS

TILE & GROUT

Crumbling, patchy grout made a company's restrooms look dirty no matter how often they were cleaned. SOLID restored the tile and grout as one system, and employees noticed.

Tile and grout fail together, so we care for them together. Every job starts by identifying the tile, the grout and any sealer already in place, and a small test area tells us what will work before you commit.

THE BACKGROUND

Restrooms are some of the hardest-working rooms in any building, and some of the most judged. For this business, the tile was sound, but the grout between it was failing, and everyone who walked in could see it.

THE CHALLENGE

- **Failing grout:** gaps and missing sections raised hygiene concerns
- **Patchy color:** old and new grout didn't match
- **First impressions:** clean restrooms still looked unclean

> *Addressing grout issues isn't just about aesthetics; it's about creating a healthier and more positive environment for employees and visitors alike.*

> SOLID Surface Care

TWO MATERIALS, ONE SYSTEM.

TILE

Deep cleaning and surface protection · forensic cleaning for heavy buildup · polishing and restoration · stain removal · topical and impregnating sealers · high-performance coatings

GROUT

Deep grout cleaning · repair and replacement · chipped and cracked grout repair · color sealing for a uniform, like-new look · grout coatings and sealers

SOLID
CARE FOR EVERY SURFACE

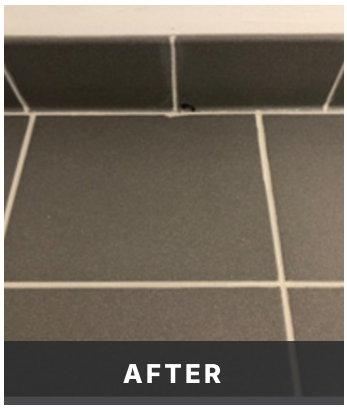

OUR APPROACH

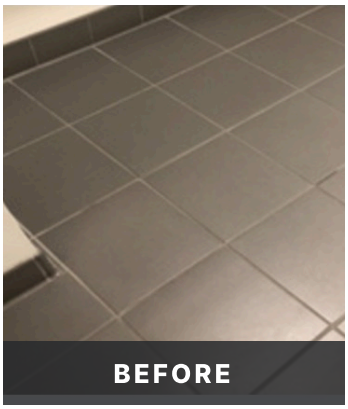

1. **Deep clean:** an alkaline cleaner cut grease and oil buildup, then a neutral rinse revealed the true condition
2. **Repair:** failing and missing grout fixed or replaced
3. **Color seal:** grout sealer applied by hand with custom brushes for one even color
4. **Protect:** a clear tile and grout coating applied in four thin layers

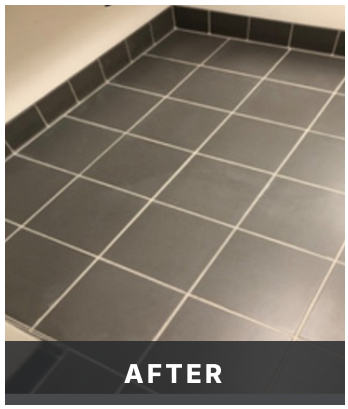

THE RESULTS

- Employees reported feeling better and healthier using the restrooms
- A boost in workplace morale
- One uniform grout color, end to end
- Protection against future soiling

GROUT COLOR SEALING: ONE COLOR. EVERY GROUT LINE.

Cleaning alone can't undo years of staining in porous grout. Color sealing repairs missing grout, then seals every joint in one even color that resists new stains. It's the fastest way to make an older tile floor look intentional again.

Better than new
One even color that looks natural, not painted.

Light to dark, or dark to light
Match your existing grout or change its color entirely.

Stain and mildew resistant
Sealed grout is virtually non-porous, so spills stay on the surface.

Easier, greener upkeep
Routine cleaning with environmentally safe cleaners keeps it looking new.

Ready to walk on
Floors can be walked on as soon as the work is done.

Built to last
Won't chip, flake or peel, and lasts for years with routine care.

WE WORK WITH: ceramic, porcelain and quarry tile · terracotta and man-made tile · stone-look porcelain · sanded, unsanded, latex- and epoxy-modified grout · indoor and outdoor, floors and walls

Make your floors look intentional again.

Start with a small test area so you see the result before you commit.
